COMPONENT

Screw

Cut off the page and paste it on the door, then drill the hole according to the drawing

Installation Instruction

There are two different way to install the front panel -- integrative installation and standalone installation

wire connection

①	Door Thickness (mm)	Cross countersunk screw
1	14mm—18mm	M4*18
2	18mm—22mm	M4*20

②	Door Thickness (mm)	Phillips pan head screws
1	14mm—18mm	M4*12
2	18mm—22mm	M4*16

F023+BF06 Installation Instructions

1. In the middle of the height of the door panel, at a distance of 45mm (recommended value) from the inside of the door frame at the door opening side of the door panel, drill a φ10mm and 2 φ7.5mm round holes.

2. Insert one end of the connecting wire into the panel, and connect the other end to the lock box through the round hole in the middle. Arrange the connecting wire to avoid being pressed. Use 2 Phillips countersunk screws M4*18 to fix the box and the panel on the door panel.

(If it is a separate installation, after connecting the wire, first use 2 washers and 2 cross pan-head screws M4*16 to fix the panel on the door panel, arrange the connecting wire to avoid being pressed, and then use 2 cross countersunk head wood screw ST3.5*16 to fix the lock box on the door panel)

3. Use 2 cross countersunk head wood screws ST3.5*20 to fix the lock box on the inside of the door frame (the distance from the side of the lock box to the surface of the door frame depends on the thickness of the door panel).
